

Donor Eggs Service to Australia

We Bring the Benefits of Overseas Egg Donation to Australia

CentralIVF is proud to be able to provide donor eggs to patients in Australia. Dedicated to putting patients first and mindful of the reasons why patients seek egg donation treatment overseas, CentralIVF allows patients to undergo treatment in Australia where they can access the high quality of care they know and trust. Our egg donors receive the same individualised attention and comprehensive clinical management that you would expect within Australia.

ID release donors (To offspring at age 18 years)

Solid quality Management System

Transport using Only on-board hand Couriers

“Rigorous Screening Process”

CentralIVF is an international assisted reproduction provider specialising in the provision of donor gametes Australia wide. CentralIVF was founded and is under the medical direction of Dr Shlomi Barak, A previously Melbourne fertility specialist and andrologist.

CentralIVF team recruits and screens egg donors from Ukraine and Georgia complying fully with HFEA, EUTCD and Australian national and state based legislation, regulation and guidelines. Our multidisciplinary donor screening team includes fertility specialists, psychologists / counsellors, and genetic counsellors. Our rigorous screening process includes full review of medical history, physical examination, genetic and psychological screening, and testing for infectious diseases.

All CentralIVF's donor gametes are shipped using purpose built dry-shippers and are always accompanied by trained on-board hand couriers. All samples undergo a preclearing process and are exempted from x- ray scans.

Donor welfare is CentralIVF's priority and we take all possible steps to ensure that each donor receives the same individual care and attention that you would expect for an Australian patient. CentralIVF ensures that both the physical and mental wellbeing of our donors are being looked after at all times.

As the first provider in Europe to implement mandatory donor counselling, CentralIVF is leading the way in ensuring that donors are fully informed and understand the process involved with providing this generous gift.

Additionally, in alignment with Australian guidelines, all CentralIVF donors undergo an 'Australia specific' donor counselling, provided by ANZICA resistered counsellor.

Egg donation is considered altruistic in nature and we follow all requirements and guidelines regarding altruistic donation that have been set by Commonwealth legislation.

CentralIVF takes very seriously its compliance with managing family limit registers. Our service operates in strict adherence to family limits set by regulation and legislation in each jurisdiction of operation.

“**We want you to
feel confident
about our services**”

Donor Screening and Eligibility

At CentralIVF all donors undergo a rigorous screening and selection process, and must meet defined criteria to be eligible for donation.

These include:

1

Oocyte donors should be between the ages of 21 and 30

2

Proven fertility –
Most CentralIVF donors are mothers themselves

3

Donors should be healthy physically and mentally

4

A complete personal and sexual history will be obtained to eliminate individuals who might be at high risk for HIV, STDs, or other infections that might be transmissible via gamete donation

5

All donors undergo significant routine testing and blood screening as part of their eligibility criteria

6

All donors undergo a detailed physical examination, a pelvic exam, pelvic scan including ovaries assessment, and antral follicle count

7

All donors receive an appropriate genetic evaluation based on medical history, in accordance with ethnic background and current guidelines

8

Psychological evaluation and counselling by a qualified mental health professional is mandatory

9

Oocyte donors will be 'ID release', meaning offspring from donor eggs have the ability to apply for the identifying information of their donor at the age of 18 years

All CentralIVF donors undergo in-depth interviews to gain full understanding of the following:

- 1 Extended family medical history (parents, siblings, grandparents, great-grandparents, uncles, aunts, first cousins)
- 2 Own medical history (including allergies, medications)
- 3 Alcohol consumption, use of illegal substances and smoking (donor and family members)
- 4 Gynaecological history (including previous donations and pregnancies)
- 5 Children's health and development
- 6 Psychological profile and practical issues linked with donation
- 7 Education, grades, achievements, profession, special talents and interests
- 8 Phenotype of donor, her parents and siblings (eye colour, hair colour and texture, skin colour, height, weight)
- 9 Donor's family origins and genealogy, race, body type, religion, vocational dispositions

“**In-depth
interviews**”

Step By Step Guide

Recipient consultation

Single Transport Shipping + \$1350 USD – Per Clinic
(minimum of 5 patient batches per shipment) *

* If less than 5 patients shipping fee will be higher.

CentralIVF Guarantee

- CentralIVF will guarantee at least (number of embryos subject to chosen program) embryos on day-3 (Embryos suitable for transfer – Good & Fair (SART grading system)).
- If less than (number of embryos subject to chosen program) high quality embryos have been created and embryo transfer resulted in a clinical pregnancy (8 weeks) – CentralIVF commitment is considered to be fulfilled.
- If less than (number of embryos subject to chosen program) embryos have been created and no clinical pregnancy resulted from embryo transfer – CentralIVF agrees to provide additional oocytes in order to fulfil their original commitment at no extra cost apart from shipping cost.
I.e. The recipient will incur no replacement costs.

* CentralIVF Guarantee is subject to a 'normal' semen analysis as per WHO parameters (No surgical procedures that require MESA, TESE, TESA, or PESA.)
